

OdorZyme Directions

The following information is for general use of OdorZyme on hard and porous surfaces

**Concentrates: (4 oz. = 1 gallon) & (8 oz. = 2 gallons)
(1 gallon concentrate = 32 gallons)**

Mix the concentrated bottle of [OdorZyme](#) with the described quantity of clean water listed on the bottle to provide the ready to use amount you ordered. For best results, **DO NOT OVER DILUTE** ! Some settling may occur if the bottle is left stationary for long periods of time. Note: Shake well before mixing with pure, clean water! For large areas of maximum saturation apply with a clean household or garden style pump sprayer. (Be sure there are NO chemical or soap residue left in the sprayer from previous use.) **DO NOT use carpet cleaning machines** as they will not saturate the affected areas to reach all the urine deposits!

Check fabrics for colorfastness in an inconspicuous area. [OdorZyme](#) is designed to be safe on any water-safe surface, but we always recommend you test an area first!

Use [OdorZyme](#) first! **DO NOT mix or use other cleaners or chemicals** at the same time as [OdorZyme](#) - This will reduce and/or hinder its effectiveness! For best results, if other soaps or chemicals have already been used, rinse repeatedly with clean water to remove all traces and allow to dry completely before using [OdorZyme](#)!

If you have additional questions for OdorZyme use or need information about wholesale orders you may contact us info@Odor-Solutions.com and we will be happy to assist. Please be sure to provide contact information and best time to contact Eastern Standard Time.
